

Syed Muhammad Ali Akhtar

Senior Backend Engineer & AI Systems Consultant

Lahore, Pakistan / Remote · syedalihakhtar660@gmail.com · +92-321-2349135 · linkedin.com/in/syedali · github.com/SyedAli9135

SUMMARY

Senior engineer with 4+ years designing backend systems, distributed architectures, and data platforms for enterprise and consumer products — now applying that same systems discipline to production AI: agent orchestration, RAG pipelines, and LLM-driven workflow automation. Provider-agnostic across Anthropic, OpenAI, and open-source model stacks. Delivered work used by millions of end users at The Entertainer, and currently architecting an agentic compliance platform for 3E, a US-based enterprise software company.

EXPERIENCE

Senior AI Consultant — CodeNinja Inc. (client: 3E, USA) Mar 2026 – Present · Remote

- Architecting agentic AI capabilities for 3E's compliance Insights platform, replacing manual legacy workflows with autonomous agents, LLM-driven reasoning, and orchestrated task automation.
- Building scalable AI orchestration systems in Python — MCP-based tool integrations, distributed execution pipelines, and memory-aware agents — for reliable, enterprise-grade autonomous operation.
- Designing production LLM architectures (RAG, contextual planning, adaptive task orchestration) that automate compliance processes and cut manual review effort.

Senior Software Consultant — The Entertainer FZ LLC Apr 2025 – Feb 2026 · Dubai, UAE (Remote)

- Led a 5-engineer delivery squad migrating Python (Flask) services to Go on AWS Lambda — serverless, Redis-cached, concurrency-tuned — cutting API latency ~40% and infrastructure cost ~35%.
- Owned module-level architecture for Americana (UAE food services), including outlet management, dynamic menus, real-time order processing, and onboarding of new 3PL partner Smiles.
- Designed AI-driven customer support and sales agents using LLM APIs, Pinecone vector search, and contextual retrieval, powering a B2C experience used by 50K+ users.
- Built search and analytics pipelines on OpenSearch and AWS Glue with Lambda-triggered cron jobs for delivery analytics and real-time operational reporting.

Software Engineer — The Entertainer FZ LLC Mar 2024 – Mar 2025 · Lahore, Pakistan (On-site)

- Built and maintained core B2C backend services (Python/Flask) for home, merchants, outlets, and offers in production, alongside enterprise integrations for HSBC and DHL using message-based workflows and circuit-breaker patterns.
- Built an event-driven delivery orchestration system integrating third-party logistics providers (Careem, Grubtech) with webhook handling, retries, and fault-tolerant processing.
- Migrated selected high-traffic APIs from Python to Go on AWS Lambda + API Gateway, improving throughput and reducing operational cost for latency-sensitive endpoints.

Software Engineer — OCloud Solutions Mar 2023 – Mar 2024 · Lahore, Pakistan

- Built a shared Python/FastAPI microservices framework with PostgreSQL/DynamoDB support, SQS/SNS event messaging, and built-in TDD/mock utilities, adopted across internal and client-facing services.
- Shipped Dockerized microservices on this framework for a real-time socio-analytics platform (Apple Music / Spotify integrations) and a Django/DRF compliance evaluation backend with Celery/Redis processing.

Software Engineer — InvoByte Aug 2022 – Mar 2023 · Lahore, Pakistan

- Built Python (Flask) REST APIs and services against MongoDB and PostgreSQL for internal and production tools; developed a real-time logistics tracking system with WebSockets, GPS ingestion, and QR-based scanning workflows.

TECHNICAL SKILLS

Backend	Python (FastAPI, Flask, Django), Go, Node.js — REST, GraphQL, event-driven & microservice architectures
AI / LLM Systems	Agent orchestration, RAG pipelines, MCP tool integrations, vector search (Pinecone), prompt & context engineering — provider-agnostic across Anthropic, OpenAI & open-source models
Data & Storage	PostgreSQL, MongoDB, DynamoDB, Redis, OpenSearch/Elasticsearch
Cloud & Infra	AWS (Lambda, API Gateway, SQS/SNS, Glue, RDS, CloudWatch), Docker, Terraform, CI/CD
Practices	Distributed systems, observability & tracing, technical leadership, legacy system modernization

EDUCATION

BS, Computer Science — COMSATS University, Lahore Sep 2018 – Jul 2022
